Trans. of Zeitschrift für Anorganische Chemie (East
Germany) 1957, v. 290, p. 184-190.

DESCRIPTORS: *Glow discharges, *Silicon com-
pounds, *Nitrogen compounds, Production

By the reaction of SiCl_4 and N_2 in the glow discharge
(SiCl_3)₃N is formed as a crystalline substance in the
presence of a series of oily and resinous products.
It occurs in two polymorphic modifications of which
the stable has a f.p. of 98° and the unstable of 44°C.
Through condensation by elimination of SiCl_4 from
(SiCl_3)₃N two series of compounds result, one of
which possesses a cyclic structure and crystalline

Order from SLA \$1.60

62-20189

Trans. of Association Technique de l'Industrie
Papierère. Bulletin] (France) 1961, no. 6, p. 480-496.

DESCRIPTORS: *Paper, *Fiberboard, Driers
(Apparatus).

The Author explains the relationship between factors affecting the output of drying sections and the quality of the products, and then reviews the process of dehydration from the forming table and smoothing presses up to conditioning. The influence of the structure of the sheet on apparent drying defects is compared with the effects actually due to drying on the final characteristics of paper and board. Many methods of conditioning, humidification, and obtaining uniform moisture content are considered and illustrated. (Author)
